

VAXWATCH

**Vaccination Attitude eXploration & Watchdog
for Analyzing, Tracking, & Combating Hesitancy**

Elevator pitch

Problem

Scale

Current approach

1. Gaps in the current approach
2. Proposed solution
3. How does it fill the gaps?

The background is a blurred screenshot of a dashboard. It features a green header bar at the top. Below it, there are three colored rectangular buttons: blue, red, and orange. The main area contains a line chart with a red line and a horizontal bar chart with a red bar. The text 'PRODUCT DEMO' is centered over this background.

PRODUCT DEMO

Sentiment Analysis

Flagging
sentiment
allows for
early
interventions

e.g.

Dashboard shows topic trends over time.

Total tweets analysed

90075

Validated tweets

456

Topic modelling

Topic modelling

Identifying
attitudes helps
to understand
hesitancy

Time series by attitudes towards vaccine

Mistrust

Hesitancy

NLP

the pipeline and the caveats

Classifier validation

Assessing the classifier's
ability to generalise to new
data

Public feedback

Continuous collaboration
with the public to increase
transparency and trust

Real time analytics and forecasting

Acknowledging uncertainty and
disclosing the limitations

Building trust

and our plan to achieve it

- Public facing online forum
 - Ongoing collaboration with stakeholders
 - Impact assessments/transparency reports
 - Encourage and incorporate community contributions
 - Multilingual support
 - Accessible and well-documented code
-

Real time analytics

- Improving topic recognition
 - Extend to different languages
 - Speed/performance trade-off
 - Forecasting
 - Interpretable models
-

e.g.

Validating Classifiers

to establish model generalisability

- Internal validation
 - Subset of our own data
 - External validation
 - Datasets from other researchers
 - Ongoing validation via crowdsourcing and feedback
-

Dealing with Trolls

how good is the model at classifying
users, bots and trolls

- Distinguishing between genuine sentiment and attempted influence is incredibly difficult (even for humans)
 - We can say it is one or the other
 - Still useful, further research can explore this in more detail
-

Thank you for your attention!
